

Hamza Khatri – hak533 – 16220

Mohammad Kedwaii – mak3799 – 16238

EE422C Project 7 Team Plan

Hamza – Server, Database (MongoDB)

Mohammad – Client (UI + Controllers)

We divided the tasks based on whether it was for the server or the client. Hamza wrote the code for ServerMain, which included connecting to and setting up the database, ClientHandlers, and notifyClients. The MongoDB database was used to store data such as login credentials, chats and messages. Mohammad wrote the code for ClientMain, made the UI in FXML and created controllers for each scene, which included handlers for the different nodes in the scenes.

Most work and all debugging was done together (as in we were working in the same room).
